Cancer Indemnity Insurance

WHY CANCER INSURANCE?
- Consider these 2017 American Cancer Society statistics:
  - 1 in 2 men and 1 in 3 women will get cancer.
  - Over 60% of costs to fight cancer are non-medical indirect costs, not covered by traditional insurance.
Understanding Cancer

What Is Cancer?
Cancer is a group of diseases characterized by uncontrolled growth and spread of abnormal cells. If the spread is not controlled, it can result in death. Cancer is treated with surgery, radiation, chemotherapy, hormone therapy, biological therapy, and targeted therapy.

Can Cancer Be Prevented?
A substantial proportion of cancers could be prevented. All cancers caused by tobacco use and heavy alcohol consumption could be prevented completely. In 2017 in the U.S., there will be an estimated 1,688,780 new cancer cases and 600,920 cancer deaths. Every day, that’s 4,630 new cancer cases and 1,650 deaths from cancer.
